SUMMARY

Full Stack Software Engineer (B.S. Computer Science, Summa Cum Laude, 3.9 GPA) who owns production web applications end to end: TypeScript front ends and Next.js/Flask back ends on Microsoft Azure, with hands-on experience in Auth0, Kafka, and caching. Cut API latency from seconds to under 50 ms, saved 1,000+ labor hours per month through internal tooling, and published a peer-reviewed paper in ACM TOSEM on automated code refactoring.

EXPERIENCE

Full Stack Engineer

Feb 2025 – Present

Mainstream Fluid and Air

Berkeley Heights, NJ

- Architected and shipped two production full-stack web applications (TypeScript front ends; Next.js and Python/Flask back ends) on Azure, each exposing a REST API and integrating third-party APIs, including a fan-selection platform for real-time performance calculations.
- Built shared platform services across both apps: Auth0 authentication with just-in-time user provisioning, Kafka pub/sub messaging, and a caching layer that cut API response times from multiple seconds to under 50 ms.
- Developed a production scheduling algorithm for fan manufacturing that streamlines build timelines by 2+ hours across roughly 300 projects per month, saving 1,000+ labor hours monthly.

Software Engineering & Methodology Researcher

Sep 2023 – Jul 2024

Stevens Institute of Technology, Dept. of Computer Science

Hoboken, NJ

- Co-developed **AntiCopyPaster 3.0**, an IntelliJ IDEA plugin that detects Type-1 and Type-2 code clones in real time via the Program Structure Interface (PSI) and auto-triggers Extract Method refactoring on copy-paste events.
- Extended detection from exact to near-miss clones and added a `code2vec`-based method-name recommender; published July 2025 in **ACM Transactions on Software Engineering and Methodology (TOSEM)**, DOI: 10.1145/3749100.

Undergraduate Research Assistant

May 2024 – Sep 2024

Stevens Institute of Technology, Dept. of Computer Science

Hoboken, NJ

- Built Python pipelines to scrape and process 10 billion+ JSON/CSV records from EVE Online and Reddit into optimized PostgreSQL databases, enabling large-scale interaction analysis and faster querying.

EDUCATION

Stevens Institute of Technology

Aug 2021 – Dec 2024

Bachelor of Science in Computer Science

Hoboken, NJ

GPA: 3.9 / 4.0

Summa Cum Laude; Stevens Upsilon Pi Epsilon Chapter Member

PROJECTS

Groovy | JavaScript, TypeScript, Node.js, Tailwind CSS, Spotify API, Vercel, Redis

Sep 2024 – Jan 2025

- Developed a social music discovery platform that improved API efficiency by 40% through Redis caching, reducing redundant Spotify API calls and enhancing performance.
- Deployed a scalable application on Vercel with 99.9% uptime, accumulating thousands of unique visitors since launch.

start.gg Regional Results Compiler | JavaScript, React, MongoDB, Tailwind, GraphQL

Dec 2023 – Present

- Designed and deployed a web application using JavaScript, React, and MongoDB, analyzing Super Smash Bros. Ultimate player performances across many geographical regions.
- Utilized the start.gg API to aggregate and filter player results based on custom statistical metrics. Example output now gains over 100k views on X: [NJ Ultimate PR Quarter 4 2023](#).

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, Java, SQL, C/C++, GraphQL

Frameworks & Testing: Next.js, React, Node.js, Flask, Express, Spring, Tailwind CSS, Jest, pytest, JUnit

Cloud & DevOps: Azure, Docker, GitHub Actions, Apache Kafka, Auth0, AWS CDK, GCP, Sentry, REST APIs, Git

Databases & Tools: PostgreSQL, Redis, MongoDB, Snowflake

AI/ML: PyTorch, TensorFlow, LLM APIs, Prompt Engineering, GitHub Copilot
